Read the following passage and answer the questions that follow:

#### Cultural intelligence

Cultural intelligence or cultural quotient (CQ) is a term used in business, education, government and academic research. Cultural intelligence can be understood as the capability to relate and work effectively across cultures. Originally, the term cultural intelligence and the abbreviation "CQ" was developed by the research done by Soon Ang and Linn Van Dyne as a researched-based way of measuring and predicting intercultural performance. The term is relatively recent: early definitions and studies of the concepts were given by P. Christopher Earley and Soon Ang in the book *Cultural Intelligence: Individual Interactions Across Cultures* (2003) and more fully developed later by David Livermore in the book, *Leading with Cultural Intelligence*. The concept is related to that of cross-cultural competence but goes beyond that to actually look at intercultural capabilities as a form of intelligence that can be measured and developed. According to Earley, Ang, and Van Dyne, cultural intelligence can be defined as "a person's capability to adapt as s/he interacts with others from different cultural regions", and has behavioral, motivational, and meta cognitive aspects. Without cultural intelligence, both business and military actors seeking to engage foreigners are susceptible to mirror imaging. Cultural intelligence or CQ is measured on a scale, similar to that used to measure an individual's intelligence quotient.

People with higher CQs are regarded as better able to successfully blend into any environment, using more effective business practices, than those with a lower CQ. CQ is assessed using the academically validated assessment created by Linn Van Dyne and Soon Ang. Both self-assessments and multi-rater assessments are available through the Cultural Intelligence Center in East Lansing, Michigan and the Center makes the CQ Scale available to other academic researchers at no charge. Research demonstrates that CQ is consistent predictor of performance in multicultural settings. Cultural intelligence research has been cited and peer reviewed in more than seventy academic journals. The research and application of cultural intelligence is being driven by the Cultural Intelligence Center in the U.S. and Nanyang Business School in Singapore.

Read the Passage and answer the following questions:

The first murder ever committed in the United States occurred in September 1630, shortly after the Pilgrims arrived in Massachusetts. John Billington was the father of two sons, one of the first to settle in the new Plymouth Colony near what is today Boston, and one of the people who signed the Mayflower Compact—and he was also the colony's first murderer.

Billington, in fact, was the first person to commit any crime in the colony, as far as we know today. He was also the first to be executed by the state in the New World. Billington's crime was to shoot a man named John Newcomen, for reasons which are lost to history.

But Billington's problems had not begun on the soil of North America. He and his sons had nearly caused a mutiny aboard the Mayflower during the arduous trip across the ocean. One of his sons, in fact, fired his gun aboard the Mayflower—near an open keg of gunpowder! The flash from the gun could easily have ignited the powder, which would probably have sunk the ship.

Once in Plymouth Colony, Billington's behavior did not improve. He refused to serve any form of military duty under the leadership of Miles Standish, a duty that was seen by the colonists as part of every man's responsibilities in the New World. He was later implicated in a plot to overthrow the entire leadership of Plymouth Colony, but a lack of evidence prompted the town's leaders to let him go free.

In the end, Billington's rebellious and angry nature caught up with him. He was found guilty of the murder of John Newcomen, and died in disgrace on the gallows.
